One day Seminar on Water Conservation

One day seminar on the water conservation was arranged by Environment and community connect club on World Water Day, 22nd March, 2017. The Principal, Prof. Dr. M R Kanjilal stated that the purpose of this seminar was to create awareness about the importance of water in our lives and show ways to conserve this most important source of life. She said that approximately 1.2 billion people lack reliable access to safe water that is free from disease and industrial waste. And 40 percent do not have access to adequate sanitation facilities. The result is one of the world's greatest public health crises: 4,500 children die every day from waterborne diseases. The mission of the leaders should be to educate the young minds to build sustainable water systems by working alongside national organizations and prepare young professionals in sustainable community development. The other speakers sensitized the issue about scarcity of water and explained in detail various techniques for implementing water efficiency and water conservation.

A competition was also organized on the Water conservation and the best and innovative ideas were given away. The first prize was awarded to Mr. Jasjit Singh, followed by Ms. Ankita Deb and Mr. Abhiroop Sengupta who stood second and third respectively.
